**Regarding: Project Introduction – Arva Pumping Station to Huron Street Transmission Main
Municipal Class Environmental Assessment
NOTICE OF STUDY COMMENCEMENT AND PUBLIC INFORMATION CENTRE #1**

Aanii Chief Plain,

The City of London (City) has initiated a Municipal Class Environmental Assessment (MCEA) Master Plan study to develop short and long term improvement plans for the Arva Huron Transmission Watermain between the Arva Pumping Station and Huron Street (See Figure 1). This study includes an assessment of the potential need to widen the existing transmission main easement to continue ongoing monitoring of the condition of the watermain and/or for potential maintenance, repair or replacement of the existing watermain. Long term considerations include evaluating the alternative options for routing the watermain between the Arva Pumping Station and Huron Street in total or for specific sections. The routing options to be investigated will address long term transmission capacity needs and provide for redundancy.

The City of London selected AECOM Canada Ltd., as the Consultant team to carry out the Class EA for this project. This letter (and the attached Notice of Commencement) formalizes the onset of the Class EA, with anticipated completion of the study in 2021.

The PIC to be held late September early October 2020 will present an overview of the project including existing conditions, the need for improvements, potential alternative solutions, preferred short and long term strategies including any potential water infrastructure projects and next steps in the study. In order to comply with social distancing requirements for COVID-19 the PIC may be held online or possibly virtually. See the City of London website for details:

<https://www.london.ca/residents/Environment/EAs/Pages/Arva-Pumping-Station-to-Huron-Street-Water-Transmission-Main-Municipal-Class-Environmental-Assessment-Master-Plan.aspx>

Work to be completed during the Class EA includes the following:

- Indigenous Community engagement and consultation;
- Technical studies (geotechnical, water modeling and asset management conditions assessment);
- Natural environment field surveys and inventories (terrestrial, aquatic, Species at Risk);
- Archaeological Assessment;
- Cultural Heritage Assessment; and
- Public and agency consultation.

Potential Involvement of Your Community

As we proceed with the Class EA, the Project Team is initiating the Indigenous Community engagement and consultation process. The Project Team would like to hear from the Anishnaabeg community of Aamjiwnaang First Nation and would welcome your input and feedback.

As the study progresses, the Project Team will provide you with the results of analyses that may be of interest to your Community (e.g. environmental baseline studies, etc.) and for the archaeological assessment, we would be happy to discuss how your Community would like to be involved.

Next Steps

We would be happy to arrange a virtual meeting with you to discuss your community's involvement as well as any initial comments regarding the project. A virtual meeting invite link will be sent upon request.

The City of London
Arva Pumping Station to Huron Street Transmission Main
Municipal Class Environmental Assessment Master Plan

NOTICE OF STUDY COMMENCEMENT

June 2nd 2020

PUBLIC NOTICE

Background

The City of London (City) has initiated a Municipal Class Environmental Assessment (MCEA) master plan study to develop short and long-term improvement plans for the Arva Huron Transmission Watermain between the Arva Pumping Station and Huron Street (See Map on Back). This study includes an assessment of the potential need to widen the existing transmission main easement to continue ongoing monitoring of the condition of the watermain and/or for potential maintenance, repair or replacement of the existing watermain. Long term considerations include evaluating alternative options for routing the watermain between the Arva Pumping Station and Huron Street in total or for specific sections. The routing options to be investigated will address long-term transmission capacity needs and provide for redundancy.

Process

The MCEA study will be completed in accordance with the Ontario Environmental Assessment Act and will follow Approach #2 of the Municipal Engineers Association Municipal Class EA (as amended in 2015) process, fulfilling the requirements for Schedule B projects, including public and stakeholder consultation.

We would like to hear from you

The City of London wants anyone with an interest in the study to have an opportunity to provide input, which will help the project team in the decision-making process.

One Public Information Centre (PIC) will be held to provide information and receive feedback. The is tentatively scheduled for late September early October 2020 and will present an overview of the project including existing conditions, the need for improvements, potential alternative solutions, preferred short and long term strategies including any potential water infrastructure projects and next steps in the study. In order to comply with social distancing requirements for COVID-19 the PIC may be held online or possibly virtually. See the City of London website for details:

Koolamalsi Chief Stonefish,

The City of London (City) has initiated a Municipal Class Environmental Assessment (MCEA) Master Plan study to develop short and long term improvement plans for the Arva Huron Transmission Watermain between the Arva Pumping Station and Huron Street (See Figure 1). This study includes an assessment of the potential need to widen the existing transmission main easement to continue ongoing monitoring of the condition of the watermain and/or for potential maintenance, repair or replacement of the existing watermain. Long term considerations include evaluating the alternative options for routing the watermain between the Arva Pumping Station and Huron Street in total or for specific sections. The routing options to be investigated will address long term transmission capacity needs and provide for redundancy.

The City of London selected AECOM Canada Ltd., as the Consultant team to carry out the Class EA for this project. This letter (and the attached Notice of Commencement) formalizes the onset of the Class EA, with anticipated completion of the study in 2021.

The PIC to be held late September early October 2020 will present an overview of the project including existing conditions, the need for improvements, potential alternative solutions, preferred short and long term strategies including any potential water infrastructure projects and next steps in the study. In order to comply with social distancing requirements for COVID-19 the PIC may be held online or possibly virtually. See the City of London website for details:

<https://www.london.ca/residents/Environment/EAs/Pages/Arva-Pumping-Station-to-Huron-Street-Water-Transmission-Main-Municipal-Class-Environmental-Assessment-Master-Plan.aspx>

Work to be completed during the Class EA includes the following:

- Indigenous Community engagement and consultation;
- Technical studies (geotechnical, water modeling and asset management conditions assessment);
- Natural environment field surveys and inventories (terrestrial, aquatic, Species at Risk);
- Archaeological Assessment;
- Cultural Heritage Assessment; and
- Public and agency consultation.

Potential Involvement of Your Community

As we proceed with the Class EA, the Project Team is initiating the Indigenous Community engagement and consultation process. The Project Team would like to hear from the Lunaapew community of Delaware Nation at Moraviantown and would welcome your input and feedback.

As the study progresses, the Project Team will provide you with the results of analyses that may be of interest to your Community (e.g. environmental baseline studies, etc.) and for the archaeological assessment, we would be happy to discuss how your Community would like to be involved.

Next Steps

We would be happy to arrange a virtual meeting with you to discuss your community's involvement as well as any initial comments regarding the project. A virtual meeting invite link will be sent upon request.

Should you have any questions, please do not hesitate to contact:

The City of London
Arva Pumping Station to Huron Street Transmission Main
Municipal Class Environmental Assessment Master Plan

NOTICE OF STUDY COMMENCEMENT

June 2nd 2020

PUBLIC NOTICE

Background

The City of London (City) has initiated a Municipal Class Environmental Assessment (MCEA) master plan study to develop short and long-term improvement plans for the Arva Huron Transmission Watermain between the Arva Pumping Station and Huron Street (See Map on Back). This study includes an assessment of the potential need to widen the existing transmission main easement to continue ongoing monitoring of the condition of the watermain and/or for potential maintenance, repair or replacement of the existing watermain. Long term considerations include evaluating alternative options for routing the watermain between the Arva Pumping Station and Huron Street in total or for specific sections. The routing options to be investigated will address long-term transmission capacity needs and provide for redundancy.

Process

The MCEA study will be completed in accordance with the Ontario Environmental Assessment Act and will follow Approach #2 of the Municipal Engineers Association Municipal Class EA (as amended in 2015) process, fulfilling the requirements for Schedule B projects, including public and stakeholder consultation.

We would like to hear from you

The City of London wants anyone with an interest in the study to have an opportunity to provide input, which will help the project team in the decision-making process.

One Public Information Centre (PIC) will be held to provide information and receive feedback. The is tentatively scheduled for late September early October 2020 and will present an overview of the project including existing conditions, the need for improvements, potential alternative solutions, preferred short and long term strategies including any potential water infrastructure projects and next steps in the study. In order to comply with social distancing requirements for COVID-19 the PIC may be held online or possibly virtually. See the City of London website for details:

Municipal Class Environmental Assessment
NOTICE OF PUBLIC INFORMATION CENTRE #1**

Aanii Chief Plain,

The City of London (City) has initiated a Municipal Class Environmental Assessment (MCEA) master plan study to develop short and long-term maintenance and improvement/expansion plans for the Arva Huron Transmission Watermain between the Arva Pumping Station and Huron Street. This study includes an assessment of the potential need to maintain and/or widen the existing transmission main easement to continue ongoing monitoring of the condition of the watermain and/or for potential maintenance, repair or replacement of the existing watermain. Long term considerations include evaluating alternative options for routing the watermain between the Arva Pumping Station and Huron Street in total or for specific sections for improvement or expansion purposes. The routing options to be investigated will address long-term transmission capacity needs and provide for water system redundancy.

The City of London will be holding a Public Information Centre (PIC) on November 25th, 2020 (See attached Notice). In order to comply with social distancing requirements for COVID-19 the PIC will be a virtual online presentation. The PIC is scheduled for:

Date: Wednesday November 25th, 2020

Time: 6:00 PM to 8:00 PM

Format: Zoom Webinar Presentation followed by a question period

The PIC will present an overview of the project including existing conditions, the need for improvements, potential alternative solutions, preferred short- and long-term strategies including any potential water infrastructure projects and next steps in the study.

To register for this PIC please send an email to: Paul.adams2@aecom.com.

Further information on the Study can also be found on the City of London webpage where the PIC presentation will also be posted.

The City of London (City) has initiated a Municipal Class Environmental Assessment (MCEA) master plan study to develop short and long-term maintenance and improvement/expansion plans for the Arva Huron Transmission Watermain between the Arva Pumping Station and Huron Street. This study includes an assessment of the potential need to maintain and/or widen the existing transmission main easement to continue ongoing monitoring of the condition of the watermain and/or for potential maintenance, repair or replacement of the existing watermain. Long term considerations include evaluating alternative options for routing the watermain between the Arva Pumping Station and Huron Street in total or for specific sections for improvement or expansion purposes. The routing options to be investigated will address long-term transmission capacity needs and provide for water system redundancy.

The City of London will be holding a Public Information Centre (PIC) on November 25th, 2020 (See attached Notice). In order to comply with social distancing requirements for COVID-19 the PIC will be a virtual online presentation. The PIC is scheduled for:

Date: Wednesday November 25th, 2020

Time: 6:00 PM to 8:00 PM

Format: Zoom Webinar Presentation followed by a question period

The PIC will present an overview of the project including existing conditions, the need for improvements, potential alternative solutions, preferred short- and long-term strategies including any potential water infrastructure projects and next steps in the study.

To register for this PIC please send an email to: Paul.adams2@aecom.com.

Further information on the Study can also be found on the City of London webpage where the PIC presentation will also be posted.

**Regarding: Arva Pumping Station to Huron Street Transmission Main
Municipal Class Environmental Assessment
NOTICE OF PUBLIC INFORMATION CENTRE #1**

Koolamalsi Chief Peters,

The City of London (City) has initiated a Municipal Class Environmental Assessment (MCEA) master plan study to develop short and long-term maintenance and improvement/expansion plans for the Arva Huron Transmission Watermain between the Arva Pumping Station and Huron Street. This study includes an assessment of the potential need to maintain and/or widen the existing transmission main easement to continue ongoing monitoring of the condition of the watermain and/or for potential maintenance, repair or replacement of the existing watermain. Long term considerations include evaluating alternative options for routing the watermain between the Arva Pumping Station and Huron Street in total or for specific sections for improvement or expansion purposes. The routing options to be investigated will address long-term transmission capacity needs and provide for water system redundancy.

The City of London will be holding a Public Information Centre (PIC) on November 25th, 2020 (See attached Notice). In order to comply with social distancing requirements for COVID-19 the PIC will be a virtual online presentation. The PIC is scheduled for:

Date: Wednesday November 25th, 2020

Time: 6:00 PM to 8:00 PM

Format: Zoom Webinar Presentation followed by a question period

The PIC will present an overview of the project including existing conditions, the need for improvements, potential alternative solutions, preferred short- and long-term strategies including any potential water infrastructure projects and next steps in the study.

To register for this PIC please send an email to: Paul.adams2@aecom.com.

Further information on the Study can also be found on the City of London webpage where the PIC presentation will also be posted.

RE: Arva Pumping Station to Huron Street Transmission Main MCEA Master Plan

Dear: Mr. Romano,

We have received information concerning the aforementioned project. The proposed project is located within the London Township Treaty area to which Chippewas of the Thames First Nation (COTTFN), the project also falls within the Big Bear Creek Additions to Reserve (ATR) land selection area, as well as COTTFN's Traditional Territory.

After reviewing the project information, we have identified minimal concerns. However, as this project progresses and studies are completed, please forward an electronic copy to consultation@cottfn.com. If there is an Archaeology Assessment conducted, we require notification and the opportunity to actively participate by sending First Nation Field Liaisons on behalf of this First Nation.

We look forward to continuing this open line of communication. To implement meaningful consultation, COTTFN has developed its own protocol - a document and a process that will guide positive working relationships. The protocol can be found on our website at www.cottfn.com/consultation. We would be happy to meet with you to review COTTFN's Consultation Protocol.

As per 'Appendix D' of the Wiindmaagewin, please find attached invoice 0048. Please do not hesitate to contact me if you need further clarification of this letter.

Sincerely,

Fallon Burch
Consultation Coordinator

Good Afternoon,

Per our previous correspondence below, I will be sending the Stage 1 Archaeological Assessment Report via our File Transfer Portal as it is 21MB and too big to attach in this email. The report will be sent to consultation@cottfn.com as requested. Let me know if you would like it sent to any other emails as well.

Please let me know if you have any comments or concerns with the report and as stated, we will ensure you are notified if/when any Stage 2-4 Archaeological Assessment work is planned.

Regards,

Stephen Romano, M.Eng, P.Eng
Environmental Services Engineer
Water Engineering Division
City of London

Good Morning,

Thanks for the providing the letter. We will ensure to keep COTTFN informed as the project progresses through the appropriate channels identified.

AECOM is in the process of finalizing a Stage 1 Archaeological Assessment Report which they will provide to COTTFN when ready. We will also notify you in advance of any Stage 2-4 Archaeological Assessment work that may be pursued in the future so you have the opportunity to actively participate.

We also acknowledge receipt of your invoice and it will be processed.

Regards,

Stephen Romano, M.Eng, P.Eng
Environmental Services Engineer
Water Engineering Division
City of London
