The fee structure above will be implemented at London Animal Shelter Services to recover the costs of veterinary supplies and medicines, with only a slight above-cost rate to off-set any supplier increases that are projected to take place in January of 2020. This is in conjunction with the City of London Subsidized Spay/Neuter Program and is to off-set medical inventory costs.

Additionally London Animal Services works closely with City of London Approved Fostering Organizations who are self-funded rescue groups with the goal of finding TNR kittens, strayed cats/dogs a home through adoption programs. London Animal Shelter Service can, for a very nominal cost, assist with medical care to ensure these homeless pets are ready for adoption. This service is only offered to City of London Approved Fostering Organizations, and only when all municipal shelter animals are first cared for and prepared for adoption. This is in conjunction with the City of London Trap S/N Release Program and Approved Fostering Organization agreement and is to off-set medical inventory costs.
